

PAPER MILLS at a *Glance*

*Right Way to
Lubrication*

AN ISO 9001 : 2000 COMPANY

Centralised

COL System : COL (Continuous Oil Lubrication) System is meant to lubricate bearings of Driers in the front/ back side of Paper Machine. The COL generally consists of stand by Geared Pumps, Duplex Filters, Heat Exchanger & necessary instruments such as Pressure Switch, Differential Pressure Switch, Thermometer, Pressure Gauges etc to monitor the working of the system. Oil is lubricated to the each bearing with the networking of Pipe Lines & fittings. Inline Filters & Heat Exchanger cleans as well as cool the oil before it enters the bearing housing. The same oil is then ejected from bearing housing to the COL tank through return header.

Rotameters (Oil Flow Meters): Rotameters are installed on the Paper Machine to regulate the flow of oil in each lubrication point. It is the most essential part for COL system as the performance of the complete system depends on rotameters. It consists of adjustable throttle valve, Flow Indicator & Float Assembly. As the flow indicator is made of polycarbonate, the flow rate can be easily visualized with the movement of the float. Rotameters are available in different flow range as per requirement. Electric sensing can also be provided if required.

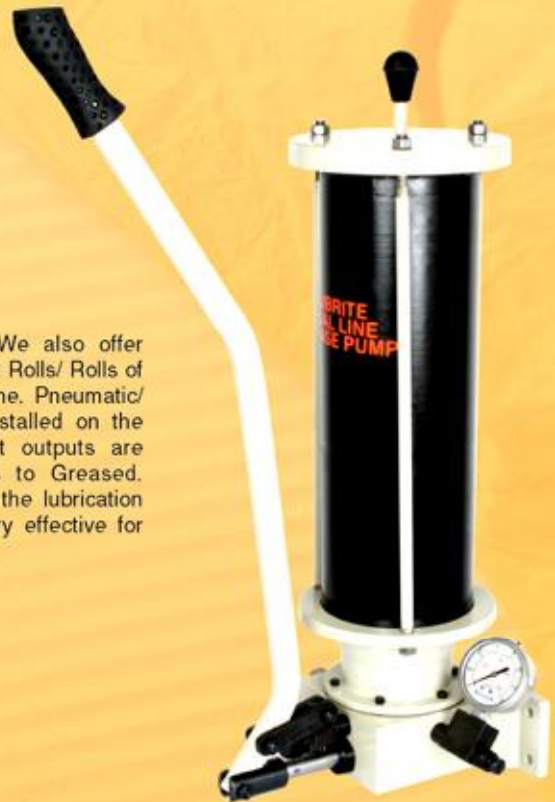

CGL System : Centralised Grease Lubrication System fitted with Dose Feeders provides a positive means of dispensing lubricant to the Felt Rolls of Wire/ Press/ Drier part from a central pumping source. The versatile rugged equipment offers flexibility in design and economy in operation. The indicators provided on Dose Feeders ensure the lubrication process. This system is widely accepted for felt rolls of hood, geared machines as the approach to lubricate the felt rolls in running is nil. This system is also applicable for Tube type Digestors.

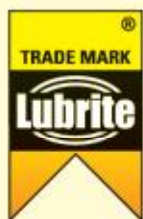

Lubrication Systems

Grease Group Lubrication : We also offer Grease Group Lubrication system for Felt Rolls/ Rolls of Wire/ Press/ Drier Part of Paper Machine. Pneumatic/ Motorised/ Manual Grease Pump is installed on the trolley. Progressive Blocks of different outputs are installed near the bunch of felt rolls to Greased. Engagement of pump & block ensures the lubrication when required. This system is also very effective for Pulp Mill Equipment.

Drip Feed Oilers for Slow Speed Washers: Drip Oilers are single point lubricators and are mounted directly on lubrication Points. These oilers dispense oil under gravity from the transparent reservoir. Drip oilers are available in different models as per requirement.

Centralised Lubrication Systems

OUR VALUABLE CUSTOMERS

Ballarpur Industries Limited (BILT)

Yamunanagar, Harayna

Century Pulp & Paper

Lalkuan Nainital, Uttranchal

J.K.Paper

Songadh Surat (Gujarat)

Abhishek Industries Limited (Trident Group)

Barnala, Punjab

Shreyans Industries Limited

NawanShar, Punjab

ABC Paper Limited

Saila Khurd, Punjab

Khanna Paper Mills

Amritsar, Punjab

Star Paper Mills

Saharanpur, UP

Rainbow Paper Mills

Ahmedabad, Gujarat

Mohit Paper Mills

Bijnour, UP

Naini Paper Mills

Kashipur, Uttranchal

Rupana Papers Limited

Nalagarh, HP

Shakumbhri Paper Mills

Moradabad, UP

Sri Ram Chandra Paper Mills

Moradabad, UP

Vishivkarma Paper Mills

Kashipur, Uttranchal

Yash Paper Mills

Faizabad, UP

Product Applications

- Steel Plants • Paper Mills • Cement Plants • Coal Mines
- Forging Industries • Rolling Mills • Machine Tools Industries
- Rubber Processing Industries • Food Processing Industries
- Printing & Packing Industries & other Industries

- We also Manufacture as per Specifications
Supplied by Customers on Request.
